PROJECT DETAILS:

Project # 1:

* **Project Title:** Online Editor

* **Technology Used :** PHP – using template engine with smarty framework

***Project Overview:** Developed an online editor project with website editor like wordpress, role-based management system, integrated nowpayment gateway for subscription plans, and a user management system to handle account settings, access control, and subscriptions effectively with using some code editor AI.

Project # 2:

* **Project Title:** Profisc HRM

* **Technology Used :** Laravel (10.10)

***Project Overview:** Profisc HRM is a comprehensive Human Resource Management System designed to efficiently manage all aspects of employee data. This system includes modules for tracking employee attendance, managing salaries, handling payroll processing, and maintaining detailed employee records. Through Profisc HRM, organizations can streamline their HR operations, ensuring accuracy and enhancing productivity.

Project # 3:

* **Project Title:** Recitepro

* **Technology Used :** Laravel (10.8)

***Project Overview:** Developed a robust content management system tailored for managing and distributing Arabic recitations, with key modules including category management, user management, content management, Surah management, reciter management, and transaction management. The admin panel allows for the addition of songs and reciters linked to Arabic alphabets, which are displayed on both the app and website. This system ensures seamless organization and access to recitations, enhancing user engagement and administrative efficiency.

Project # 4:

* **Project Title:** Medendx

* **Technology Used :** Laravel (10)

***Project Overview:** Developed the Medendx HRM System, where I created and managed APIs using Laravel. Implemented a role-based management system to control user access and ensure secure handling of employee data.
